## **A Level Computer Science Bridging Unit**

Course Titl	е		Examin	ation Board and Website Address
Computer	Science		AQA: A	QA   Computer Science and IT   AS and A-level
			Comp	uter Science
		Coi	urse Intro	oduction
Paper 1	40% of A-level	On screen exam 2½ hours 100 marks	5. 6.	Data Representation – Number systems, information coding, encryption  Computer Systems – Logic Gates, Boolean Algebra, translators, classification of programming, system
Paper 2	40% of A-level	Paper exam 2½ hours 100 marks	7. 8.	software  Computer Architecture – Machine code, assembly language, CPU, internal & external components  Consequences of uses of Computing – Moral, legal and ethical considerations
NEA	20% of A-level	75 marks	9.	Communication and Networking — Communication methods, topologies, wireless, the internet, TCP/IP, CRUD applications, REST, JSON, JavaScript
2. Dar dic gra 3. Alg opt 4. The Abrillan	bcedural-ori hniques ta Structure tionaries, h ph, tree, st orithms — cimisation eory of Con straction, a	- Imperative, iented, OOP, recursive  es - Arrays, lists, ash tables, queue, ack, vector, fields  Traversal, search, sort,   nputation -  utomation, FSM, archy, complexities, ses	11. 12.	Databases – Data modelling, relational databases, SQL, client server database  Big Data – Volume/velocity/variety, fact based models, distributed processing and functional programming  Fundamentals of Functional Programming –  Function type, first-class object, function application, partial function application, composition of functions, ma, filter, reduce, lists  NEA – The computing Practical Project

## Task 3

The Visual Bay Sick Diner specialises in simplistic pub style catering, with a set menu for convenience and speed. Diners select from three different meal packaged options (standard £8, premium £12, deluxe £15); each with a set starter, main, dessert and drink. The diner can cater for up to 25 people at any one time, with fixed tables of a maximum of 5 people to any one table.

The Diner works on a no-booking policy, so guests turn up and see if a table is available. As a result, the host needs to know what is available and when existing guests began their meal to give accurate meal times.

Upon ordering at a table, the waiter will ask which menu option each quest would like. This is then stored with a booking reference (Table number & number of guests & day & three letters of month & waiter initials; all in upper case).

Upon request, a waiter can generate a food order on screen to recall to the kitchen what is required; in a tabular manner. They can also generate a digital receipt, formatted with full details of the evening (title/date/time/orders/pricing/total/taxes/discounts/tips). If guests have a "sick" card, they receive 10% off standard, 15% off premium and 20% off deluxe meals on Tuesdays, Thursdays or Sundays.

A system is required to provide the functionality above with appropriate validation, optional file writing and anything else you feel professionally appropriate.

What you will hand in:

- 1. Pseudocode algorithm.
- 2. Commented code following a consistent house style.
- 3. Program walkthrough (input/output screens with explanations).
- 4. Discussion of project limitations.
