

GCSE BIOLOGY

Y11 NEWSLETTER OCTOBER 2021

Dear Parents/Guardians

It has been absolutely wonderful to welcome back Year 11 this half-term. We've been really impressed with their enthusiasm and dedication to getting on with this new normal. I wanted to outline how we are approaching this year for them. As ever, if you have any questions or concerns please get in touch via Parentline.

Miss Montgomery
Subject Leader, Biology

TOPICS UNTIL CHRISTMAS:

11J1 Separate:

- *Homeostasis in Action* - The Kidney, Transplants & Dialysis = Chapter 12 Assessment **WB 8th NOV**
- *Reproduction* - Reproduction, Meiosis, Inheritance & Genetics

11J2,J3,T1,T2,T3 Combined Higher:

11J4,J5,T4,T5 Combined Foundation:

- *Reproduction* - Reproduction, Meiosis, Inheritance & Genetics = **Assessment WB 18th OCT**
- *Variation & Evolution*

RIPLEY ST THOMAS
CHURCH OF ENGLAND ACADEMY

Attachments:

I have included checklists and key words for the current chapters your child will be studying. They have also been given these in class. These will be really useful for the end of chapter assessments. I have also included a general help sheet on revision, along with a checklist for their Christmas Mocks.

FIREFLY:

If your child misses a lesson, they should log into Firefly and follow:
Science - Blended Learning - Relevant class

CHRISTMAS MOCK:

Revision checklist attached. All sets will complete a Paper 1. Firefly tasks have been set by class teachers to direct revision for these Mocks.

"THE COMEBACK
IS ALWAYS
STRONGER THAN
THE SETBACK"

A student's guide to

EFFECTIVE REVISION

find what works for you!

Lets get started!

Leaving all your revision and cramming at the last minute is stressful and has limited success. The earlier you start revising, the more likely you are to effectively cover all the content and remember it

Create a suitable space

Find a quiet spot away from distractions such as the TV/your phone and keep your things all in one place, organized by subject!

Put a plan in place

Work out how much time you have and how long you can spend on each subject/topic- make sure all subjects get adequate time set aside!

Take regular breaks

It is possible to work too hard or for too long in one go! Your brain needs a rest to help it process information.

REVISION STRATEGIES:

Create your own revision resources using Flashcards.

Method 1: Write a question on one side of the card and the answer on the back.

Method 3: Write the quote on one side, and your thoughts/themes on the back

Method 2: Write a key term or concept on one side, definition on the back

Method 4: Draw a diagram on one side, and the sequence and process on the back

You can colour code your flash cards into topics, case studies or subjects!

Dual Coding- putting a visual next to your written information!

Your images must be relevant to the information you have written. Therefore if you were to see the image without the text, it should trigger you to remember/recall the information

Quizlet is another online platform in which you can create your own flashcards but digitally. You can access hundreds of other quizzing resources for your chosen topic/subject created by other users too!

Seneca Learning website:

Seneca has been designed by cognitive scientists to help students remember topics better and reduce their stress levels. You can access revision notes on each of your topics and then take quick tests to check your learning.

Switch the subject of conversation:

It's so easy to be distracted by friends or be tempted to put revision on the backburner for a quick chat so get the best of both worlds, quiz each other. Showcase all your knowledge to your friend, share ideas, you never know, they may have an idea or understanding about something, that you haven't!

Concept maps/mind maps:

A popular method is concept/mind mapping. Put a question or a topic in the center of the page and develop the idea into subtopics, including facts, chains of development, themes and/or quotes.

Revision clocks:

These sheets are available with a quick google. Broken into 12 sections this is a good way to break down a topic into small manageable chunks. You can even break it down into 5 minute chunks to see how much you remember!

Deliberate practice

Set time aside to practice what you will be doing in the exam - answering exam questions! Ask your teacher for questions!

Personal learning checklists:

Using the specification, create a list of topics you need to know and RAG your confidence. Ask your teacher first as they may have these already.

Revision guides/ knowledge organisers:

Use revision guides or knowledge organisers to help you focus in on what you need to learn. Use these in conjunction with another method mentioned.

Provide someone at home with a list of key terms or questions:

Provide someone at home with a list of key terms or questions that you want to master this week, every time they see you, they have to ask you one of these questions! It may even replace the usual conversation at the dinner table!

REVISION MISCONCEPTIONS:

There are many ways to revise, yet there are certain activities that make you feel like you are effectively revising, but in most cases, are just superficial!

Highlighting: More often than not we highlight text without actually thinking about why we are highlighting what we are highlighting. "To highlight everything, is to highlight nothing!"

Re-reading/summarising: Ensure that you are reading and making notes with an intended purpose, simply reading text is unlikely to provide you with information that will make its way into your long term memory!

TOP TIP: Colour code into themes to ensure your notes have a logical thinking process behind them

L.pellegrino

11J1 ONLY: HOMEOSTASIS

Chapter 12 Key Words List

| Key word | Definition |
|-------------------------|---|
| Dialysis | The process of cleansing the blood through a dialysis machine when the kidneys have failed. |
| Selective Reabsorption | The process in the kidney where the materials needed in the body such as glucose, some mineral ions and water are reabsorbed back into the blood from the filtrate. |
| Urea | The waste product formed by the breakdown of excess amino acids in the liver. |
| Vasodilation | The blood vessels that supply the skin capillaries dilate. |
| Vasoconstriction | The blood vessels that supply the skin capillaries constrict. |
| ADH | Hormone which regulates the water balance of the blood by changing the amount of water reabsorbed by kidney tubules. |
| Homeostasis | The maintenance of a constant internal environment. |
| Thermoregulatory centre | Monitors and controls body temperature. |

Chapter 12 Checklist

Your chapter 12 Homeostasis in Action test is on _____. Please ensure you revise. This can be done in lots of ways:

- Making mind maps
- Making flash cards
- Making revision notes
- Quizzing your parents/your parents quiz you.
- Doodle
- Quizlet

| You should know... | Revision Notes? | Revised? | ☺ ☹ |
|--|-----------------|----------|-----|
| I can explain in detail how mechanisms lower or raise body temperature. | | | |
| I can explain why it is dangerous if the body temperature is too high or too low. | | | |
| I can calculate percentage changes in volume of water lost or gained by the body. | | | |
| I can suggest an effect of liver failure on the body. | | | |
| I can explain the link between high levels of protein in the diet and an increase in urea concentration of urine. | | | |
| I can apply knowledge of the processes of filtering and selective reabsorption to diagnose problems and suggest treatments for patients using results from a urine test. | | | |
| I can explain how the production of ADH will change in given situations. | | | |
| I can explain how these changes will affect the amount of water in the urine. | | | |
| I can suggest and explain suitable concentrations of substances in dialysis fluid. | | | |
| I can apply knowledge of what affects the rate of diffusion, to explain how dialysis is made efficient. | | | |
| I can evaluate in detail a model of kidney dialysis. | | | |
| I can explain why family members are usually a good choice for an organ donor. | | | |
| I can use economic, social and ethical arguments to evaluate treating kidney failure by dialysis and transplant. | | | |

ALL CLASSES

Key Words List: Reproduction

| Key word | Definition |
|-----------------------------|--|
| Asexual reproduction | Involves only one individual and the offspring is identical to the parent. There is no fusion of gametes or mixing of genetic information. |
| Sexual reproduction | Involves the joining (fusing) of male and female gametes, producing genetic variation in the offspring. |
| Meiosis | Two stage process of cell division that reduced the chromosome number of daughter cells. It is involved in making gametes for sexual reproduction. |
| Natural Selection | The process by which evolution takes place. Organisms produce more offspring than the environment can support. Only those that are most suited to their environment will survive to breed and pass on their useful characteristics to their offspring. |
| Bases (DNA) | Nitrogenous compounds that make up part of the structure of DNA and RNA. They are represented by the letters A, C, T and G. |
| Nucleotide | A molecule made up of a sugar, a phosphate group and one of four different bases. They are key units in the structure of DNA and RNA. |
| Mutation | A change in the genetic material of an organism. |
| Alleles | Different forms of the same gene sometimes referred to as variants. |
| Homozygous | A genotype with two identical alleles for a characteristic. |
| Heterozygous | A genotype with two different alleles for a characteristic. |
| Genotype | The genetic makeup of an individual for a particular characteristic, for example hair or eye colour. |
| Phenotype | The physical appearance/biochemistry of an individual for a particular characteristic. |
| Dominant allele | The phenotype will be apparent in the offspring even if only one of the alleles is inherited. |
| Recessive | A phenotype that will only show up in the offspring if both of the alleles coding for that characteristic are inherited. |
| Sex chromosomes | Carry the information that determines the sex of an individual. |
| Polydactyly | A dominant inherited disorder that results in babies born with extra fingers and/or toes. |
| Cystic fibrosis | An inherited disorder that affects the lungs, digestive and reproductive system and is inherited through a recessive allele. |
| Carrier | A person with one copy of the recessive allele for a genetic disorder. They therefore have no symptoms of the disorder, but can pass the allele on to the next generation. |
| Genetic engineering | The process by which scientists can manipulate and change the genotype of an organism. |

Reproduction Checklist

Your chapter 13 Reproduction test is on _____ Please ensure you revise. This can be done in lots of ways:

- Making mind maps
- Making flash cards
- Making revision notes
- Quizzing your parents/your parents quiz you.
- Doodle

| You should know... | Revision notes | Revised | ☺ ☹ |
|--|----------------|---------|-----|
| The differences between asexual and sexual reproduction. | | | |
| The process of meiosis. | | | |
| The importance of meiosis in genetic variation. | | | |
| * Reproduction in fungi, plants & malaria parasites * | | | |
| The structure of DNA | | | |
| The importance of the human genome. | | | |
| * What bases & nucleotides are * | | | |
| * How proteins are made * | | | |
| * What gene expression and mutations are * | | | |
| How to create a punnet square/genetic diagram | | | |
| How to use a family tree. | | | |
| How Polydactyl is inherited. | | | |
| How cystic fibrosis is inherited. | | | |
| How embryo screening is done & the concerns. | | | |
